Key Findings

1. Product Performance:

Finding: Paseo is the strongest-performing product.

Evidence: Paseo contributes approximately **27.80% of total sales** and also generates the **highest profit** among the products analyzed.

Business Implication: Paseo is a key revenue and profitability driver, so maintaining its inventory availability and supporting it with targeted marketing can help sustain overall business performance.

2. Country Performance:

Finding: The United States is the largest sales-generating market, but not the most profitable.

Evidence: The **United States** generates the highest total sales, while **France** generates the highest total profit and **Germany** has the strongest profit margin.

Business Implication: The company should not evaluate markets based on sales alone. Strategies should focus on both **revenue generation and profitability** when deciding where to allocate resources.

3. Segment Performance:

Finding: Government is the dominant customer segment.

Evidence: The **Government segment contributes approximately 44.22% of total sales**. The **France–Government combination** generates the highest profit.

Business Implication: The company should prioritize retention and expansion within the Government segment while using the successful France–Government combination as a benchmark for improving other markets and segments.

4. Discount Analysis:

Finding: Higher discounts do not necessarily lead to higher profitability.

Evidence: The **Medium discount band generates the highest sales**, while **Low/No Discount provides a relatively stronger balance between sales and profit**. The **High discount band shows weaker profitability**.

Business Implication: The company should avoid excessive discounting and optimize discount levels based on their impact on **both sales and profit margins**, rather than using discounts solely to increase sales.

5. Time-Based Performance:

Finding: Sales and profit show variation across months and years.

Evidence: **October 2014 recorded the highest sales**, while **December 2014 generated the highest profit**.

Business Implication: Historical sales and profit patterns can be used to improve **inventory planning, promotional campaigns, and resource allocation** during high-performing periods.

Recommendations

1. Product Strategy: Prioritize inventory and marketing efforts for **Paseo and other high-performing products**, while reviewing lower-performing products to identify opportunities for improvement.

2. Market Strategy: Continue strengthening the **United States** as a major revenue market while studying the strategies behind the stronger profitability of **France and Germany**.

3. Customer Segment Strategy: Focus on retaining and expanding the **Government segment**, which contributes **44.22% of total sales**, while developing strategies to improve other segments.

4. Pricing & Discount Strategy: Optimize discount levels to achieve a balance between **sales growth and profitability**. Avoid excessive high discounts where they significantly reduce margins.

5. Seasonal Planning: Use historical monthly trends to plan **inventory, marketing campaigns, and promotional activities** around periods of higher sales and profitability.

6. Profitability-Focused Decision Making: Evaluate products, markets, and customer segments using **Sales, Profit, and Profit Margin together**, rather than relying only on revenue. This will support more sustainable and profitable growth.
